Figure E-1: Everest Land Use

**Exhibit B****Pg XV.E-4**

***Conditions in the area north of Kirkland Avenue between cedar Street and Kirkland Way are described.***

To the north of Kirkland Avenue there are slightly different conditions. Several of the parcels east of Cedar Street and north of Kirkland Way have certain development constraints. Topography is difficult, lots have an irregular shape, and there is the noise from the railroad to contend with. Internal access from Kirkland Avenue does not follow the dedicated Cedar Street right-of-way, and circulation is awkward and limited. Also, single-family units are located to the east up the slope and along Kirkland Avenue.

***Future multifamily is not to spread further east. Medium densities (9 and 12 dwelling units per acre) are permitted where indicated.***

Future multifamily in this area shall not extend further to the east than presently existing multifamily development (see Figure E-1). Medium density (nine dwelling units per acre) is appropriate for the majority of the land east of Cedar Street. The existing apartment site located at the northeast corner of the intersection of Cedar Street and Kirkland Avenue is appropriate for slightly higher residential density (up to 12 dwelling units per acre), due to its lack of environmental constraints, its direct access onto Kirkland Avenue, its proximity to other lands of similar density (across Cedar Street), and its ability to physically accommodate additional development with a minimum of impacts to surrounding uses. For the two parcels east of Cedar Street and south of the multifamily development and Ohde Pea Patch..."
